CS222 Weekly Team Activity Report

Student Information

NetID: surya6
Team Number: 26.058
Assignment Due Date (as listed on Canvas): Sunday, March 15

1. Weekly Meeting

Did your team hold a synchronous meeting this week?
(virtual or in-person)

Yes

Meeting Date: March 10, 2026
Meeting Time: 7 PM (virtual)

Briefly describe the main topics discussed.

This week's meeting focused primarily on the overall course structure, grading breakdown, and expectations for the semester. We reviewed how weekly reports are evaluated, what counts toward participation, and the importance of consistent commits and documented progress.

We also discussed our high-level project direction and agreed to spend this week planning before diving into implementation. The team clarified roles, communication channels, and how we'll manage tasks using GitHub issues and pull requests.

2. My Participation in the Meeting

During the meeting, I participated in the discussion about how we want to structure our workflow. I asked questions about grading expectations to make sure we're aligned on what counts as meaningful weekly progress.

3. Work Completed Since the Previous Meeting

Since this was primarily a planning week, my main work involved:

- Reviewing the project requirements and grading rubric in detail
- Cloning the team repository locally
- Confirming that I can push branches and open pull requests
- Creating a small test change to verify repository access

I created a dummy branch and submitted a pull request to confirm that I have proper access to the organization repository and that my GitHub setup is working correctly.

Artifact from your work this week (PR, commit, issue, etc):

Pull Request #3 — “Add repository initialization document for surya6”

4. Tasks That Are Still In Progress

No major technical tasks were started this week. We are still finalizing the detailed project plan and defining specific implementation milestones.

5. Plan for the Next Week

Next week, I plan to:

- Help break down the project into smaller, clearly defined tasks
- Create GitHub issues for initial implementation steps
- Begin setting up the basic project structure (depending on our finalized design)
- Coordinate with teammates to assign ownership of core components

6. Repository Status

Team GitHub repository link: https://github.com/SP26-UIUC-CS222/Team-26.058

Have you cloned the repository locally?

Yes
